In df.info we can see that this data has total 891 records and total 12 columns.
 From which Cabin column has null values more than 30% so we will drop that.
 Age and Embarked columns too has null values but we will replace those with mean and mode respectively.
 All the data is in proper datatype.

In df.describe() we can see count mean standard deviation min 1st quartile 2nd quartile and 3rd quartile.
 We can see all the numerical columns here,

we can see the correlation of all columns by comparing mean and median .
And also we can see the value of standard deviation.
